
XenMobile: Mobile Apps overview

Many organizations face security risks when employees use unsanctioned consumer apps and services. However, prohibiting the use of apps stifles users' productivity. XenMobile apps are purpose-built for business, including enterprise-grade productivity features that users will love, while still having security controls that IT needs secure data and meet compliance requirements.

XenMobile Apps include apps developed by Citrix as well as third party partners. These MDX-enable apps allow IT to:

- Separate XenMobile app data from personal app data by containerizing company data
- Enable seamless integration with MDX-enabled apps, ensuring data and resources can only be accessed by IT-sanctioned, MDX-enabled apps
- Provide granular, policy-based controls and management, including app-specific micro-VPNs for accessing internal networks

XenMobile apps allow IT to provide secure mobile apps to employees with a rich user experience. XenMobile apps are workflow-driven, offering business features that won't be found in consumer apps, keeping employees productive while on-the-go. The workflows in XenMobile apps offer a powerful incentive for employees to use our apps.

The table below lists the currently available XenMobile apps developed by Citrix. For a list of third party MDX-enabled apps please visit: [Citrix Ready Marketplace](#).
